Parameters

Number of spokes
8

Camera frame rate [frames/s]
10

True rotation speed [rev/s]
1.00

Mark one spoke (breaks the symmetry)

True rotation direction
- Clockwise (car driving right)
- Counter-clockwise

Play animation

Playback speed
0.5

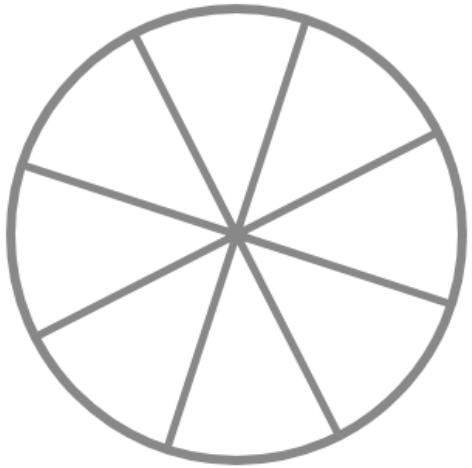

Wagon-wheel effect – temporal aliasing

A camera samples the wheel only `fps` times per second. With identical spokes, only the rotation per frame modulo the spoke spacing can be observed.

True rotation / frame	Spoke spacing	Perceived rotation / frame	Perceived speed
36.0°	45.0°	-9.0°	-0.25 rev/s

Aliasing: the wheel appears to rotate **backwards** (opposite to its true direction).

Camera view (sampled)

Reality (very high frame rate)
